

0 Light (year 3)

Prior Learning: light is an electromagnetic wave that can be seen by humans, darkness is the absence of light

POS: Light

Concept: physics transformation of energy

Facts	Vocabulary
<p>1. Sources of light:</p> <p>a) natural sources – sun, stars, fire and electricity in storms</p> <p>b) artificial light – light bulbs, LED lights, fluorescent lighting</p>	<p>ultra - a prefix occurring originally from Latin, with the basic meaning “on the far side of, beyond.”</p>
<p>2. Reflection of light:</p> <p>a) reflection of light is the process of sending back the light rays which falls on the surface of an object</p>	
<p>3. Sun</p> <p>a) the sun is 93 million miles away</p> <p>b) most of the space between the Earth and the sun is empty which allows the sun’s energy to reach us easily</p> <p>c) the sun’s energy is light and heat</p> <p>d) the sun helps our bodies make vitamin D which helps us to have strong bones and teeth.</p>	
<p>4. Danger from the sun:</p> <p>a) ultraviolet light - is a form of radiation which is not visible to the human eye.</p> <p>b) sunburn - ultraviolet rays can burn our skin cells, the skin gets red and feels warm.</p> <p>c) 80 percent of the sun’s ultraviolet rays can get through on a cloudy day.</p> <p>d) eye damage – never directly look at the sun even with sunglasses on</p>	
<p>5. Formation of shadows:</p> <p>a) shadows are formed when light is blocked by an object</p>	
<p>6. Size of shadows:</p> <p>a) the closer an object is to a light source the bigger the shadow</p> <p>b) the further away from a light source the smaller the shadow</p> <p>c) the shortest shadows are formed at noon when the sun is highest in the sky.</p>	 <p>As the light source moves higher in relation to the object, the shadow gets shorter. As the light source moves lower, the shadow gets longer.</p>
